CHOUNNA YEMELE Gergino

Environmental Engineer; Climate & Water Security Specialist; Climate Risk & Resilience Analyst
Padova, Italy | gerginochounna7@gmail.com | +39 351 293 6686
Online presence: LinkedIn | Personal site |
Research: Google Scholar | ResearchGate | ORCID

PROFESSIONAL SUMMARY

Impact-oriented Climate & Water Security Specialist with 5+ years of international experience translating geospatial analytics, hydrological modelling, and machine learning into climate-resilient infrastructure and water-security solutions across Sub-Saharan Africa. Experienced in coastal risk assessment, land subsidence analysis, integrated water resources management, and translating scientific evidence into policy-relevant solutions that support sustainable development, water security, poverty reduction, and climate resilience in low- and middle-income countries. Track record includes leading multi-year assessments quantifying climate exposure for over 18 million coastal residents across 7 African cities and co-authoring 7+ peer-reviewed publications, translating climate and environmental evidence into risk-informed development insights. Recognized for building multilateral partnerships and mobilizing global youth and scientific networks to advance groundwater governance and climate policy dialogue. Fluent in **English** and **French**, with intermediate **Italian**.

EDUCATION

Birkbeck University of London — London, UK
Master's of Science, Public Policy and Management — *Oct 2026 — Jul 2027*

University of Padova — Padova, IT
PhD, Civil and Environmental Engineering Sciences — *Dec 2022 — Nov 2025*

- Curriculum: Risk, Vulnerability, Environment, Health, and Territory
- Dissertation: Vulnerability of low-lying cities of the Eastern Gulf of Guinea to combined land subsidence and sea-level rise.
- Visiting PhD Scholar at Wageningen University & Research, The Netherlands. April - July 2025

International Master, Environmental Engineering (Laurea Magistrale) — *Feb 2019 — Dec 2021*

National Advanced School of Public Works Yaounde — Yaounde, CMR
Master of Engineering, Environmental Engineering — *Nov 2015 — April 2021*

CORE COMPETENCIES

- **Strategic Sector Expertise**: Climate Risk Assessment & Adaptation Planning, Coastal Infrastructure Resilience, Water Security, Integrated Water Resources Management (IWRM), Disaster Risk Reduction (DRR).
- **Technical & Analytical Tools**: GIS (QGIS, ArcGIS Pro), Earth Observation & InSAR, Hydrological/Hydraulic Modelling (HEC-RAS, HEC-HMS, EPANET), Land Subsidence & Vulnerability Analysis.
- **Data Science & Programming**: Python, MATLAB, Machine Learning (Random Forest, XGBoost, PINN), Predictive & Multivariate Statistical Modelling.
- **Governance, Leadership & Stakeholder Management**: Policy Analysis and Communication, Environmental Impact Assessment (EIA) & Safeguards, Multi-Stakeholder Dialogue, Youth Mobilization, Intergovernmental Cooperation.

PROFESSIONAL EXPERIENCE

Environmental Research Fellow & Engineer — Feb 2026 — Oct 2026
DICEA, University of Padova — *Padova, IT*

- Lead coastal flood risk and land subsidence vulnerability assessments across 7 rapidly urbanizing cities in the Eastern Gulf of Guinea, integrating InSAR subsidence data, sea-level projections, and IPCC climate scenarios to deliver actionable evidence to support climate-resilient planning for over 18 million low-lying residents through 2050.
- Develop exposure and vulnerability maps for critical infrastructure (transport networks, water utilities, urban assets) using advanced GIS and statistical modelling, providing information supporting infrastructure investment prioritization and coastal protection planning.
- Author technical briefs and high-level recommendations bridging complex geophysical data and climate-resilient development policy, translating complex geophysical evidence into actionable recommendations to support climate adaptation and resilient infrastructure planning in Central Africa.

Research Scientist & Environmental Engineer Dec 2022 — Nov 2025

DICEA, University of Padova *Padova, IT*

- Quantified land subsidence rates and coastal exposure for 18 million residents across 7 major African cities using InSAR analysis, GIS modelling, and multivariate statistics to establish the evidence base for sea-level rise and subsidence impacts along the Eastern Gulf of Guinea including Douala, necessary for national adaptation planning and coastal zone management.
- Developed predictive machine learning models (Random Forest, XGBoost, PINN) projecting land subsidence and coastal exposure through 2050 to improve 30-year forecast reliability, supporting climate-resilient infrastructure design for rapidly urbanizing coastal zones.
- Analysed a 45-year urban growth dataset (GHSL) to quantify infrastructure-load impacts on coastal subsidence, providing key evidence to support land-use planning and risk reduction for over 2 million residents in high-risk zones.
- Co-authored and peer-reviewed scientific publications in high-impact journals (Nature, Natural Hazards and Earth System Sciences), establishing technical credibility and contributing pioneering baselines for international land subsidence discussions.

Visiting Scientist & Engineer April 2025 — July 2025

Wageningen University & Research *Netherlands*

- Assessed current and 2050-projected exposure of populations and critical infrastructure across 7 fast-growing African coastal cities, integrating Earth observation and statistical modelling to create exposure maps, provided the number and location of population at risk.
- Improved environmental exposure model accuracy by 20% through a novel multivariate framework fusing multi-spectral satellite observations, demographic projections, and climate scenarios. Result: strengthened the reliability of coastal adaptation recommendations for consortium partners.
- Delivered technical reports and GIS-based decision-support tools to European and African research partners, streamlining evidence-based policy design for highly vulnerable coastal ecosystems or deltas.

Environmental Engineer Nov 2021 — Aug 2022

Green Connexion Environmental Group *Yaounde, CMR*

- Executed Environmental Impact Assessments (EIAs), ecosystem diagnostics, and compliance monitoring as part of the Nachtigal hydropower project and Mpem & Djim reserve park. Supported compliance with international environmental safeguards and national regulatory standards through environmental assessment and monitoring.
- Led environmental data collection and community engagement across remote project sites, optimizing ecological sustainability outcomes; contributed to a waste management audit securing national/international compliance.

Graduate Water Resources Scientist Nov 2019 — April 2021

National Advanced School of Public Works (ENSTP) *Yaounde, CMR*

- Led water-quality assessments and watershed diagnostics across 2 agricultural watersheds in the Northern Cameroon, providing evidence of poor essential nutrients, and promote sustainable practices. Directly improved livelihoods and climate resilience for over 10,000 rural farmers.
- Conducted hydrogeological investigations and designed a semi-artificial reservoir system for dry-season irrigation, improving agricultural water security and reducing groundwater dependency in semi-arid Northern Cameroon.
- Co-authored peer-reviewed publications on hydrogeology and groundwater quality to create awareness of the quality of soil and water, which affect the population and agricultural productivity; delivered master's thesis presentation with distinction (Excellent).

Chair of the Communication Committee March 2024 — May 2026

UNESCO Groundwater Youth Network (GWYN) *Global platform*

- Coordinated global communication and stakeholder engagement strategy for a multilateral network of 2,000+ water professionals across 114 countries; led advocacy and policy roundtables linking youth-led science with intergovernmental bodies (UN-IHP, World Bank Water Forward).
- Served as official Rapporteur and Session Moderator at the UN Groundwater Summit 2022, managing expert panels of government, scientific, and civil society representatives. Resulting in advancing the transboundary aquifer management agenda and youth voice.
- Coordinated the drafting, publication, and dissemination of reports, technical newsletters, and action toolkits addressing groundwater vulnerability and sustainable climate adaptation.
